jellyfin

Via DNF (current)

Installed via package manager (in RPM Fusion repo)

Config are store in two location:

`/etc/jellyfin/*.xml`

default values

`/etc/sysconfig/jellyfin`

`JELLYFIN_FFMPEG_OPT="--ffmpeg=/opt/ffmpeg-jellyfin/ffmpeg"`

FFMPEG custom

source: https://github.com/jellyfin/jellyfin-ffmpeg/releases

untar dans `/opt/ffmpeg-jellyfin/` en root

Podman way (not current)

```
podman run \
                                        --detach \
                                        --label "io.containers.autoupdate=registry" \
                                        --name jellyfin-prod \
                                        --publish 127.0.0.1:8096:8096/tcp \
                                        --rm \
                                        --user $(id -u):$(id -g) \
                                        --userns keep-id \
                                        --volume /srv/jellyfin/cache:/cache:Z \
                                        --volume /srv/jellyfin/config:/config:Z \
                                        --volume /data/media/video/film:/media/film \
```

```
                                    --volume /data/media/video/series:/media/series \
                                    --volume /data/media/video/animes:/media/animes \
                                    --security-opt label=disable \
                                    docker.io/jellyfin/jellyfin:latest
```
